

# Data Collection

For this project we will need the following data:

1. FourSquare API: From this API we can get all the Restaurants/ Cafes/ Eateries in Pune area, along with their location, ratings, reviews, price range, cuisines available, etc.
2. Zomato API: If there is no sufficient Data in FourSquare API for the information of places, we can also use the Zomato API, as people in Pune more widely use Zomato.
